Introduction

There is now a proven way you can use to make very high profits with lower risk than investing in stocks, starting a business or just about any other method of making money. You are about to discover how you can use a breakthrough new way of playing roulette that wins 100% of the time and has been called "infallible."

If you would like to make from $149 to $4,350 an hour in the most relaxed and pleasant way you can imagine, then the Double Cross Roulette Strategy is for you!

On the next few pages I am going to show you the exact secrets behind a strategy that you can use to create a powerful, seemingly unbreakable, new source of income that is more reliable than any you have ever experienced.

If you are tired of wasting your time and efforts in a dead-end job or on trashy and worthless so-called "business opportunities" then this time sensitive special report is for you.

If you are like my friends and associates, you have been struggling just to make an income high enough to support your standard of living.

Whether you have been job hopping, have tried any of hundreds of mostly discredited MLM schemes, have investigated mail order
marketing (much harder and more expensive than it is represented), or have been searching for a failsafe way to make money on the Internet, I know you have been disappointed.

What's even worse is that you have been bombarded with so many "get-rich quick" schemes that are really so risky and difficult that you have probably become jaded and almost immune to a bona fide proven way to make money.

The scary part of trying to pick the "right way" to make money easily and safely is that you are in a race against time. Every minute that you lose either from indecision, procrastination, or just plain failure, is like taking another step backwards while a chosen few seem to rush on ahead.

You may not know me, but I sincerely hate the idea of you wasting another day, another week, or even another year of your life, trying to increase your income using methods that are destined to fail. Regardless of how most of these ideas are presented, you have undoubtedly learned from experience that they are full of risk and even highly dangerous to your emotional and financial health.

I am about to reveal another way of making lots of money that is 100% proven to work yet is both fun and incredibly profitable. This is the same strategy that my associates and I use to make huge amounts of money with almost 100% chance of success and close to zero chance of failure.

I am talking about the dynamic new Double Cross Roulette Strategy. This is a time-tested strategy that my friends and I use to . . .

Win $1479 an hour making minimum bets in land-based casinos, hour after hour, day after day, week after profitable week.

Pull in profits as high as $4,340 an hour in unsuspecting Internet casinos that are just waiting to be soundly beaten by this strategy.
Win quickly time after time using a copyright protected "hit and run" strategy that is so effective that most online casinos can be beaten in 6 minutes or less.

Create powerful, predictable sources of income that are so reliable that one associate, John D., called this method the "ATM method - just punch in the right numbers and wait for the cash to appear."

And, that is just the beginning . . .

What I have waiting for you is like no other moneymaking method you have ever seen. It is a strategy that has been exhaustively tested and 100% proven to work. Almost unbelievably, it is documented to win a record breaking 100% of the time.

Furthermore, it is so reliable that I can tell you when you use it, you will make an average return of 30% per hour on the money you risk in any real casino.

What's more, if you play in the faster and even more profitable online casinos, you will more than double your hourly win rate.

In fact, after you work your way up to making $25 wagers, you will make predictable profits of $3,725 an hour!

Please read on -

I am about to prove to you that these are not unfounded claims or numbers I pulled out of the air to impress you. I will share with you uncontestable documentation and proof that my colleagues and I are winning these amounts even as you read this, hour after hour, day after day, week after week.

What's more, I will show you how you can join us and set up your own reliable ATM-like money flow in a manner that is easy and even pleasant.
How My Colleagues Work this System to Create Continuous Windfalls for Themselves

I got a call last night from Charlie B, one of my original testers of the Double Cross Roulette Strategy.

Charlie has been playing exclusively in local Native America owned casinos. He called to compare our experiences in several of the casinos. After comparing notes (casino A is too crowded, but still profitable, Casino B is dead and not much fun, but allows for a higher hourly win rate, and so on), I asked Charlie how he was doing with the strategy.

One thing I ask all of my testers to do is keep careful records and I thought that Charlie would have the information at his finger tips.

I heard some papers rustling as he gave me his report -

"I have been playing for just over three months now. My total winnings are over $57,000 as of yesterday.

"Of course, that includes the learning curve phase. My current weekly winnings are much higher now. Even though I spend less time playing. I have increased the size of my bets, which kicks up my win rate."

I interrupted him. "Give me some exact numbers, Charlie. For example, how have you done the past two weeks?"
He laughed. "You thought you would catch me behind on my record keeping. I knew you would probably ask me that, so I brought everything up to date before I called you."

The sound of papers being turned in the background.

"I made $8,748 this last week and $9,732 the week before. This is before deducting travel expenses, the cost of meals and tips and a special treat I got for my wife. Now, if …"

I interrupted him again. "That's all I need Charlie. I just wanted to get the amounts of your current weekly winnings. If you don't mind, maybe you can email me the details later. I'll take you out to lunch next week to pay you back."

I wanted to share this brief conversation with you. Charlie, Chrissie, Bart and George are all making large amounts of money using Double Cross Roulette.

Their backgrounds are very diverse. Chrissie is a 26 year-old in graduate school going for her Master's degree in counseling. She makes between $5,000 and $6,000 a month playing part-time.

Bart is a 66 years young retired electrical engineer. He supplements his retirement with his roulette winnings. Last month his "supplement" was over $7,000.

George is an active commercial real estate broker and investor. The last time I talked to him he told me he was thinking of quitting the "real estate racket" and becoming a full time Double Cross Roulette Player. "There's nothing like an income that's all cash, with no employees, no paperwork and no potential legal liability."

R.J. is a 23 year-old with no other means of income and calls me "dude." He makes over $4,000 a week "just fooling around" as he calls it.
Mr. A. just turned 81. Everyone calls him Mr. A. and he calls me Mr. S. He is a soft-spoken grandfatherly type who developed a true killer instinct at the roulette wheels. The last time I checked, he had the highest winnings of any of us.

Jackson makes jewelry and has never used a computer. The only gambling he had ever done before learning this strategy was pitching pennies in junior high and playing slot machines. With zero knowledge of roulette, Jackson learned to play and win in less than a day. Now, he regularly wins between $3,500 and $4,000 a week playing in two local casinos.

I could go on and on. But, here’s the critical point I want to make -

**It doesn’t matter how old you are, your background, educational level, job or professional. Men, women, Gen Xers, Baby Boomers and Seasoned Citizens are succeeding beyond their wildest dreams using Double Cross Roulette.**
The Secret is in the Details

I have been gambling in casinos since 1980 when I learned to shoot craps. Since then I have learned to play just about every casino game.

I have experienced the thrill of winning over $12,000 in a single craps session.

I have beaten the blackjack game, both with card counting (now almost impossible to use) and by using special betting progressions and careful loss control techniques.

I have played and won at roulette, video poker and even slot machines.

Throughout the years if I have learned anything about gambling it is that there is No Magic Bet or Single Piece of Information That Will Make You a Winner.

Winning is a combination of astute money management, accurate bet selection, correct timing and lots of discipline. You are probably thinking, "Yeah, yeah, I have heard this stuff before. When is he going to get to the meat of it?"

Stay with me. We're almost there.

Most gambling strategies have some ideas about money management, different theories on how to bet, yet another set of
rules for selecting tables and finally some almost magic way the author uses to somehow make this profitable.

Double Cross Roulette is like nothing you have ever seen. Every detail of the strategy has been carefully developed, tested and then integrated into a tightly woven system that uses multiple tools that simply overwhelm the casino's built-in house edge. There is no magic elixir, just cold hard battle proven logic.

Let me explain . . .
The Power of the Double Cross Roulette Betting Strategy

Every gambling system, stock market investing system, winning poker strategy or successful business strategy uses some type of "betting strategy."

It can go by different names. For investing in the stock market, you've got dollar cost averaging, portfolio allocation theories or periodic portfolio balancing.

With business, you never hear the word "betting strategy" used, but with the sky-high failure rate of new businesses, businesses share much of the risk of gambling. With businesses, you get such procedures as cash management, budgeting, strategic planning, flexible budgeting and even a whole field of study called "operations research."

Gambling betting strategies have perhaps the most esoteric sounding names of all. You can flat bet, raise wagers after losses or increase the size of your bets after wins. You can use some type of progression, generally falling into the groups of positive (raise bets when winning) and negative (raise bets after losses).

You may decide to use a Martingale or even a Mini-Martingale type of progression.

Want to increase the size of your wins? Try a Grand Martingale based betting progression.
Would you like to use a strategy that requires you to use paper and pencil to keep track of your wagers? Try the Labouchere Betting Method or to chase long shots, a Reverse Labouchere Strategy.

Still not satisfied? How about the D'Alembert betting scheme or why not use a Fibonacci progression to light up your life.

I could go on and on. Whether you are playing the stock market, trying to run a business or wagering against the casino at the roulette wheel, you will end up using some system. Even just guessing is a form of system!

Some systems are better than others. But the betting strategy employed by the Double Cross Roulette Strategy is one of the most effective ever devised.

"This betting strategy is very powerful, yet unique in that it does not result in making wagers that are too large. It is 100% effective, easy to use and wins at an extraordinary rate. It definitely gets my vote."

George D., Richmond, Virginia

A totally unique strategy is used that was developed exclusively for this winning strategy. Instead of "borrowing" one of the old off-the-shelf systems, the Double Cross Roulette Strategy uses a system custom tailored for winning at roulette.

It is not complicated, as you will make only one bet at a time.

It is not simplistic like the systems that require you to double up after losses or raise your wager by a fixed amount after winning.

It is a scientifically based system that incorporates a perfected "ratchet principle" to adjust the size of your wagers by just the right amount.
Maybe the best way to describe it is to call it a betting strategy based on the Goldilocks principle. It is not too hot and not too cold, but just right.

Let me give you an example of how the Double Cross Roulette System protects your bankroll. The Martingale System is one of the oldest around. It calls for doubling your wager after a loss and continuing to double your bet until you eventually win.

If you are wagering $5 and lose, your next bet will be doubled, for $10. If you lose this bet also, you will lay out $20. If you are unfortunate enough to lose this wager too, you will plop down $40 for your next wager. The theory behind this system is that when you eventually win, you will recoup all of your losses plus win the amount of your original bet, for $5. Neat huh?

The problem is that if you have a string of losses, your wagers will get larger and larger. You will be required to risk more and more money on each bet until you reach the house limit and can no longer double your wager.

Here’s an example of a Martingale series - 5 10 20 40 80 160 320 640. If we assume that the house betting limits are $5 to $1,000, then this is as far as we can go. If we lose the $640 bet, we would be required to wager $1,280 next. If we start to make this bet, the dealer will admonish us, "No more than $1,000, please."

We are defeated. Even with a $2,000 house limit, we can only raise our wager one more time. If we bet $1,280 and lose, our next wager would be for $2,560. Once again the dealer will refuse our wager as it exceeds the house limit.

Besides not being allowed to wager $2,560, we must also stop at this point and question the logic of a system that requires us to risk $2,560 to win the grand sum of $5. Put this way, the Martingale System doesn't seem very smart, does it?
With Martingale, you assume too much risk relative to the final payoff. What if I told you that there is a way to bet that wins at a very high rate, yet has very low risk.

The Controlled Risk Betting Strategy or CRB Strategy is the one used in the Double Cross Roulette Strategy. It is like no other strategy ever created.

When you use it, you will win a very high percentage of the time. In fact, when you couple it with the rest of the principles used in this system, you will win 97.75% of the time. This is a very high win rate, yet, amazingly, it is done with low risk.

Let's take a look at two $5 betters. Mr. A. uses the Martingale "double-up" strategy. Mr. B. chooses the CRB Strategy.

Unfortunately, neither player is very lucky today and they each lose eight consecutive bets. Mr. A. has now lost $1,275 and will be called on to wager $1,280 next.

Mr. B. also has a loss, but it is only for $120. His next bet will be for $15.

First, I want you to notice that while losing eight consecutive bets is close to a disaster for Mr. A., it is only a minor setback for Mr. B. While Mr. B. is also in the hole, his loss of $120 is less than 1/10th the size of Mr. A.'s. Furthermore, Mr. A. has just hit the wall with his betting and cannot increase the size of his wagers any more because of house limits. He is stuck with a $1,275 loss with no way to recoup it.

Mr. B.'s next wager of $15 is well under the maximum bet and the odds are very great that Mr. B. will not only recoup his $120 loss with a few more bets, but win the contest by making a few more astutely timed wagers.

The Double Cross Roulette Betting Strategy gives the player the power to win large amounts at an amazingly high rate.
Using the Double Cross Roulette Betting Strategy, a typical $5 bettor will win $745 an hour in a land-based casino and $4,340 in an online casino. I don't know about you, but I am absolutely thrilled to be able to risk a very small amount of money and be able to win $3,450 an hour playing online with $5-based wagers.

If you decide you want to win more, you can start with $10 wagers or even work your way up, using casino winnings, to $25 wagers.

The documented win rate for Double Cross Roulette, using $25 wagers in a land-based game, is $3,725 an hour. As an old blonde dealer working in a decrepit sawdust joint casino once told me, "Honey, you're talking my language."

Before I forget, you're probably wondering how much you will have to risk to win from $1497 to $4,340 an hour making $5 bets. Have you got $100? I actually recommend that you use $150, because I am very conservative, but $100 is all you really need to start winning very respectable amounts.

In fact, you might be tempted to run out and start your new career once you learn Double Cross Roulette. But you would only be partially armed.

You see, the full Double Cross Roulette Strategy also uses a unique way of determining where you bet that has an unprecedented success rate.
Ladies and Gentlemen, Place Your Bets

The flip side of the powerful Double Cross Roulette Betting System is knowing where to place your bets. With this strategy you make only two to three bets at a time.

The question becomes, "Where do you place them?"

Someone totally confused might say -

"Gee, I dunno, maybe I ought to flip a coin."

A mathematically inclined type might pull out a long sheet of paper, showing a record of roulette spins and use some complex algorithm to determine his next wager.

Yet, both would be using lousy approaches to select their wagers. There is a better way that doesn't require any kind of extensive analysis, but will beat any of the math-based approaches out there.

Yet amazingly, our confused friend who suggests flipping a coin will be 100% delighted with this approach.

The mathematics-oriented type will love it for its simple elegance, and the more straightforward bettor will love its ease of use.

As one of my associates, Joel said,
"Double Cross Betting is the best way I have ever seen to 'automatically' determine where to make every bet in a way that is easy to learn, easy to use and yet offers 'killer' performance."

Most betting strategies are very simplistic. You can pick one spot and continue to play, since, as one math-smart and casino-dumb expert observed, "Picking your bet has no effect on the outcome of any game with independent trials. One guess is as good as the other."

If you believe this, then you have been brainwashed into behaving in a way that the casino bosses love.

Picking when and where you bet may be the greatest determinate of your success or failure.

Most gamblers and even college professors, who write books on the subject, don't have a clue as to how to go about selecting a bet.

Fortunately, the Double Cross Roulette Strategy uses a method that works smoothly and automatically to tell you exactly where to make each bet.

**Double Cross Betting is a time-tested way to automatically place each wager with a high level of confidence.**

Most betting methods use some type of fixed formula, like "bet the same as the previous decision or pick one side and continue to bet it."

If you have used either one of these approaches you probably have some great stories to tell about playing and then eventually losing.

Double Cross is not like anything you have ever experienced. It does not use any type of fixed formula to pick your bets.

It you have ever observed roulette wheel spins, craps table decisions, blackjack plays or even coin flips you may have become
dismayed in trying to find any kind of pattern to the outcomes. Most people are and that's why they basically give up when it comes to developing any kind of bet selection method that can actually adapt to changing patterns and outcome in real life play.

That's why nearly every bet selection method has been doomed to failure until now. When you use some kind of predefined way of making your bets, sooner or later the table will zig when you zag and do this enough times that you will lose.

The only hope of success is to use some kind of betting strategy that can actually change or adapt to table changes.

That's where Double Cross Betting proves its worth. It incorporates a proven adaptive system that automatically changes your bet selection as table conditions change.

Instead of helplessly placing losing wager after losing wager using the typical way of placing bets, you will quickly adapt your bets to changing playing conditions.

This approach works so well, that when you combine it with the Double Cross Betting Strategy, you will never lose again!

You've now heard about how you can win high amounts with low risk and a small investment. But you're probably wondering how much time you will have to spend doing this. After all, "time is money."
The Power of "Hit and Run Gambling"

Some strategies might be winners but they require that you play too long. Card counters in blackjack are a good example of players who will sit at the same table, even through losing streaks lasting hours, without daring to move. It's almost as if they have become glued to their seats.

Unfortunately, this is not the best way to win at blackjack, roulette or any other gambling game.

**The smart money will back the hit and run player every time.**

Let me tell you more about this style of play.

A "hit and run gambler" will not tolerate any type of losing situation very long. If he is not winning, he will take a powder. Many times, this results in taking many small losses with an occasional large win.

While this can be a winning approach, it is too tedious for me. Quite frankly, I don't like having losses even "strings of small losses."

Fortunately there is a way of combining the logic of hit and run gambling without having to live with losing most of the time.

**You will remember that I told you how effective the Double Cross Betting Strategy is. When you combine it with the Double Cross Bet Selection Method you will win 100% of the time!**
Now, I want to add one more piece of information that I know you will love.

It won't take you very long to win a game.

If you play in land-based casinos, you will usually spend from 18 to 25 minutes per game. By game I mean from the time you convert your cash to chips until you push your chips toward the dealer and ask for color, signaling that you are ready to leave.

If you play in a much faster online casino, a typical session at the table will last from 5 to 7 minutes.

This is a good example of hit and run gambling. Each game is so quick that you never become bogged down in some marathon-like contest that lasts for hours.

However, I want to point out a critical difference between the typical hit and run gambler and the Double Cross Roulette player.

Most hit and run gamblers quickly change tables because of small losses. In other words, they choose to leave because they are losing money and they want to limit their losses.

**A Double Cross Roulette player also plays short sessions. But here's the important advantage he or she enjoys. Double Cross Roulette Players leave tables quickly because they have already beaten the house and they are using predefined departure rules to leave with winnings in hand.**

There is a huge difference between leaving a table with a small loss, and leaving after locking up a win.

**Now, you can get some real insight into how our Double Cross Roulette players operate. Using this strategy they combine a series of rapid wins to amass large winnings in a very short period of time.**

![Header Image]
Let's Compare Using the Double Cross Roulette Strategy With Other Options You May Have

I realize that you have lots of choices in ways to make extra money. For example -

You can take on an additional part-time job.

You can start an Internet business that brings in oodles of money.

Maybe, you would like to set up a home office and start selling some type of product from home.

Or become an affiliate of some successful web sites and start promoting online products.

Or, if you have from $25,000 to $750,000 sitting around, you can buy a franchise.

Each of these options will cost you a lot of time and money and each can still fail.

Imagine how you would feel if you spent your life savings on a franchise that then folded?

While getting another job may not entail much risk, do you really want to spend another 20 to 30 hours a week working for another boss doing something you hate?
Several of these options not only entail substantial time and money investments but may require that you obtain additional training and education before you can even qualify.

"There is no such thing as a free lunch."

So let's take a hard look at what you will face if you decide to become a Double Cross Roulette entrepreneur.

The first thing you will note is that it won't cost you much. In fact, the cost of starting and winning with this strategy is less than the cost of an evening for two on the town.

It is hard to compute just how much it might cost you to set up a business enterprise. If you work from home, require no additional training, and are very, very talented, you might get by with investing from $25,000 to $50,000 for a startup business.

While we are "comparing" I want you to think about a couple of other things.

Are you ready to start managing other people? Unless you are prepared to work 80 hours a week and try to do everything yourself, it is fact of life that you will need to find, hire and train employees to be successful in your own business.

What about financing? Do you know where to set up lines of credit or lease expensive equipment and office furnishings?

Here's a question most people never think about until they are in over their heads in a new business venture.
Are you willing to risk everything you own? Almost every source of business financing will require a personal guarantee from you. If for some reason your new business fails, you could end up losing your cash, your home and your livelihood, not to mention your reputation.

Let me show you a better way...
Why Not Get Rich in The Dark?

You probably have gotten the wrong idea about professional gamblers from the media. My associates and I are not a bunch of desperados. We don't spend all of our time in casinos. We have families, friends, homes and lots of other interests.

We don't risk everything on a turn of the card or the spin of a wheel. And we don't broadcast how we make lots of money.

I personally believe that what I do when I am in a casino is nobody's business. If someone outside of my inner circle asks how I did on a trip to Las Vegas, I usually say "I broke even."

Here's the real beauty of using the Double Cross Roulette Strategy -

No One Has to Know About Your New Source of Wealth.

Let me tell you a few more advantages when you use this strategy as your personal wealth builder-

It won't take much of an investment. As I have mentioned, you can get started for $50 ($100 recommended).

It won't take much of your time. You can use this strategy just to pay for vacations. If you prefer, you can play a couple of hours a week online. Or, if you like, you can invest ten hours a week and make $5,000 or more a week.
Being a successful Double Cross Roulette Player doesn't require any special training. I have prepared a very special course and toolkit that will give you all the information you need to get started instantly.

You won't have to buy something else to get started. I don't know about you, but I hate buying things that promise me the world, only to find out that I have to buy something else that is much more expensive to really get started. I would not do that to you. What you will receive is totally complete.

You won't have to do something else before you can get started. This is another thing I hate. Suppose you wanted to make money online. First, you find out that you have to have a web site. Then you have to find a web host. Next you need to either find someone to do your web site or buy some software and learn how to do it yourself. And, you are still not there. You better learn how to advertise your site. As you get suckered into something like this, the list gets longer and longer. Remember, your original objective was to make some money. Instead of making money, you end up spending more and more time and money with no end in site. With the Double Cross Roulette Strategy, you will have everything you need (other than the fifty bucks playing money) to get started. I call it a "no muss, no fuss" way to become an entrepreneur.

You don't have to find and hire outside experts. It seems like every aspect of our lives involves relying on someone else to fix some complicated thing that we own that we cannot fix ourselves. Right now, I have to take my GMC Yukon XL into the dealer. I really hate going to the dealer, but I am stuck because I don't know how or care to learn how to fix it myself and my warranty requires that I go to the dealer. So I am forced to do something I hate, because I don't have other options.

With Double Cross Roulette, you don't need anyone else to help you, advise you or to fix anything.
What Do You Get If You Decide to Try Out the Double Cross Roulette Strategy?

My associates and I are very straightforward. The course we have put together for your exclusive use is absolutely complete. What's more, if you decide to claim your copy, you can download this information in the next five minutes and be winning money by tomorrow morning.

You can feel confident that what you will get with this course is exactly like what I have told you about in this special report. After following the step-by-step instructions, you will be able to start winning so consistently that you wonder what you did before you got this information.

You will also become part of a small group of friends and associates that know how to use this system. Even though I have decided to let a few more people like you in on this strategy, I am strictly controlling how many copies will be released.

This course will only be released through a special web site. That way, we can control how many copies are distributed. When you grab your copy you can be certain that you will be only one of a few persons trusted and privileged to have this powerful information.

Look: The reason most people fail is because they don't know where to start or exactly what to do once they decide to try something new. That's why I have organized this course into a clear step-by-step guide and toolkit that is proven to work.
While this information will appeal to seasoned gamblers who know how hard it is to win, it is perfect for beginners too.

It doesn't matter if you have never stepped foot in a casino, and the only roulette wheels you have seen are in old James Bond movies. You will be able to quickly and easily learn the exact steps you will take to jump onboard this phenomenal profit maker.

Not only is this course complete, you don't need any special training or background to become very successful using this strategy.

You don't need to know beans about gambling.

Your age is not a factor (except that I don't recommend underage gambling).

Your sex is not an issue. This strategy is perfect for men and woman.

Your educational level will not be a factor. We have medical doctors, CPAs and lawyers in our group of winners. But we also have persons who never finished high school, plumbers electricians and a house painter.

To succeed with this system all you need to do is download your copy of the course, follow the step-by-step examples, practice playing some and then set up your own new business as a Roulette Entrepreneur.
Procedures and Bets in Roulette

Roulette is easy to play and a wide variety of wagers can be made. The American version is fairly fast with the dealer spinning the wheel from 80 to 110 times per hour.

The French version of the game is more leisurely with only 30 or 40 spins per hour.

The bets are basically the same in the French and American versions of the game, with the principal difference being that the American wheel has both a zero and a double-zero on it.

The French wheel has numbers 1 to 35 plus a zero. It is the zero that accounts for the house edge of 2.70%. This percentage is cut in half on the even-money wagers in European casinos, where these bets are placed *en prison* when a zero shows up. They remain on the table "in prison" until the next spin. For even-money wagers that win, the bets are returned; for those that lose, the casino takes the wager. A second option is also offered, that of *le partage* (sharing). With this option, when a zero comes up, a player with an even-money bet keeps half his wager and gives up half. In Britain no choice is allowed, only *le partage* is allowed.
With the *en prison* and *le partage* rules in force, the house edge is reduced to about 1.38% for even-money wagers.

The American wheel, with the addition of the double-zero, offers the same payoffs on wagers, but the extra zero increases the house edge to 5.26%. When a zero or double-zero occurs, all wagers lose, including all even-money bets.
The game is played with a wheel containing 37 numbers in the European version (1-36 plus zero) and 38 numbers in the United States version (1-36 plus zero and double-zero). The numbers are printed on spaces marked on a wheel and separated by metal dividers called frets. The numbers do not run consecutively and there are different layouts for the French and American wheels.
Wagers are made by placing chips in various positions on the table. The American tables are much smaller than the French ones, and the players can usually reach the portion of the layout on which they wish to wager and therefore place their own wagers. In the French version, the table is much larger, and the croupiers use a rake to place and pay wagers.

In either game, the croupier or dealer will assist a player wishing to make a wager.

The casino allows you to bet all of the numbers, including the 0 and 00. If you bet any of the numbers "straight up" and your number comes up on the next spin of the wheel, you will be paid 35 to 1 (you will have your original wager, plus chips equal to 35 times your wager). You can also bet different combinations of wagers, including two, three, four, five and six number bets, as
well as dozens, columns, red or black, odd or even and high or low.

The players make their wagers by placing chips on the spaces of the layout in any manner allowed by the rules. The dealer starts the wheel spinning, then flips the ball on the bowl's back so that it travels in the opposite direction of the spinning wheel. Players may continue to place bets while the ball and wheel are still in motion until the dealer announces "no more bets." In the French version, the dealer will state "rien ne va plus", meaning the same thing. Bets placed on the layout after this announcement are not valid and will be returned to the player.

When the balls comes to rest, it marks the winning number, the winning color and any other combination bet made. The dealer announces the winning number.

On the first spin, the dealer has no fixed point from which to spin the wheel or ball. Thereafter, he will spin both from the position of the winning pocket of the preceding spin.

</tbody>
</table>
A single number bet is made by placing a chip on the number itself without touching any lines. Bets on two numbers are placed on the line between numbers. Three number wagers are made on the outside line of the layout. Four number bets go on the intersection of four numbers.

A five number wager is made on the American wheel and covers 1, 2, 3, 0 and 00. This wager is placed on the line separating the 1, 2, 3 from the 0 and 00 spaces at a corner intersection. This becomes a four number wager on the French wheel. Incidentally, the five number American wheel wager has the distinction of giving the house an edge of 7.89% as compared to 5.26% for all other wagers on the American wheel.

A six number bet is made by placing the chip at the intersection of the side line and the line between two rows of numbers. Bets on columns are made by placing chips on one of the three spaces on the bottom of the layout, under the columns of numbers. Dozens are wagered by placing the wager in the appropriate box. On the French table, 12^p, 12^m and 12^d correspond to 1st, 2nd and 3rd 12s. Bets on adjacent columns or dozens are placed on the line between the two columns or dozens. Bets on even-money chances are made by placing the wager inside the box corresponding to the wager. For instance, a wager on red is made by placing the bet in the red box on the outside of the layout.

In the American version of the game, each player is issued a different colored chip, so that no two players play with the same color chips. Typical colors used are: white, yellow, brown, red, green and purple. These chips themselves have no value as a player determines the value of the chips when he buys in. For instance, one player's chips may represent $.25 each, while another player's chips may be worth $1.00 each. The dealer "marks" the value of each color chip with a button.

A player using the colored roulette chips should never leave the table with the colored chips, as they may not be cashed in or used in any other casino game. When you are ready to leave the table,
ask the dealer for color and he will change the roulette chips for regular casino chips.

In the French game, chips represent fixed amounts, such as five francs, twenty five francs and so on. You need to watch your own wagers like a hawk as there is no difference in color to differentiate your wager from anyone else's. Consequently, there are many more disputes in the French game, and more than once another player has tried to grab my winnings. I have found that it pays to stand firm in these matters and that if the dispute can be resolved in no other way, the house will pay both players.

Because of the size of the French table, you will require the croupier's assistance in playing many of your wagers. An experienced croupier will remember your wager (especially if you tip after winning a large payoff) and can be your ally when these disputes arise.

The Player's Edge

As powerful as the casinos may seem to be, you can walk into a casino knowing that you have an edge over the house. As a successful gambler, you have to be able to win more than you lose. What are the tricks you will use to gain an edge over this formidable adversary?

Your edge will consist of the following actions:

1. When you are losing, you can quit.

2. When you are winning, you can walk out with the casino’s money.

3. You can vary the size of your wagers.

4. You can pick where to play.

5. You can modify your strategy based on table results and conditions.

6. You can use discipline to develop a winning plan and then stick to it.

Most players never realize what an advantage these offer. The casino cannot be flexible. It must continue to offer the same games, with the same rules, without the ability to react to changing
conditions. The nimble player can weave and dodge and even choose not to play a particular game. Let's elaborate on the player's edge:

1. **When you are losing, you can quit.** You can always control your losses while the casino must continue to offer its games regardless of the outcomes. Most roulette players buy a fixed amount of chips and then don't quit until all of the chips are gone. There is no law that says you have to lose your entire buy-in before you lick your wounds and call it a game. Smart players learn to read a losing session long before all of their chips are gone and know how to walk away with at least some of their game bankroll intact.

2. **When you are winning, you can walk out with the casino's money.** As a player you can always control when you stop playing. While the casino must continue offering its games twenty-four hours a day, you can jump in, grab a win and pull off. You have ultimate flexibility while the casino does not.

3. **You can vary the size of your wagers.** One approach a player can use is to increase the size of his wagers when he is winning and reduce them when losing. He may also choose to raise his wagers after losses so that only a win or two out of many wagers will put him ahead. A player can set up options where he doesn't have to win the majority of his bets. Using these techniques effectively goes a long ways towards minimizing the house edge and even turning it into a player edge!

4. **You can pick where to play.** You can play at tables offering the best situations for you. You can choose to play at tables that are almost empty by playing during slack periods. This can significantly increase your hourly win rate. You can also make it your business to know where the best payoffs are.

If you are looking for certain table conditions, you can scout for the right table before you play. You have numerous options while the house must offer the game to anyone who is old enough to play,
conforms to fairly lax casinos standards and has some money to begin play.

5. **You can modify your strategy based on table results and conditions.** Every table develops different trends at different times. Since we are going to concern ourselves only with even-money bets, we will take a hard look at patterns, streaks and other occurrences. You can adjust to the changing playing conditions as they occur. If the table is repeating a particular color, you can modify your strategy to take advantage of this trend. If the chop from one color to another, seemingly in an unpredictable manner, you can make still different moves. In short, you have the ability to bob and weave, duck and thrust, parry and counter punch. The table can't react to anything. Every roulette table is like an inanimate object that must endlessly grind out numbers, while you circle and pounce.

6. **You can use discipline to develop a winning plan and then stick to it.** The house has ultimate discipline. The very structure of the casino games and atmosphere exhibit a carefully planned approach designed to transfer funds from the players' pockets into the casino coffers in the shortest time possible. Of course, to a large extent this relies on most players' lack of discipline. Once you gain the discipline to set up a winning game plan and then follow it, you can effectively neutralize much of the casino's edge over the crowd of players.

A few days ago I played a couple of hours of roulette in a local casino. I played for low stakes, buying in for $500. I used the Double Cross Roulette approach. It was a typical roulette table with the other players scattering their bets all over the layout. I was the only player who seemed to have a plan for his play.

I don't believe that anyone else at the table won any money but me. The difference between the rest of the players and me was that I had a plan for the evening and I stuck to it. With a $500 buy-in, I set $300 as my profit goal. **In a little over an hour, I checked my chips, found I was up $312 and cashed in. Most**
players don't have this kind of discipline, but once you learn it, you can walk away with win after win!

The player's edge comes from all of the points listed above, plus the ability to hide your wins from the casinos. There is really no reason that anyone other than you and your significant other should know about your casino prowess. There are people who would kill you for fifty bucks. Casinos really don't like winners. That's why a number of Las Vegas casinos still bar blackjack card counters. It may not be fair, but even with all of its advantages, if you somehow manage to win, the casino can deny you access to their games.

The book *How to Survive and Prosper as a Professional Gambler* offers some excellent suggestions on how to consistently beat the casinos and still stay on the bosses' good side. I recommend it to you. You can grab a copy free by visiting the Power Blackjack web site and signing up for our free newsletter. See - [http://www.silverthornepublications.com/PowerBlackjack/](http://www.silverthornepublications.com/PowerBlackjack/)

The net effect of applying all of the elements of the player's edge is to neutralize and even overcome the casino's
advantage. Your biggest edge will come from your discipline. Interestingly, this is the same kind of discipline the casinos expect from their dealers, floor bosses and staff. If it works for them, you know that it will work for you too!
Setting Up Your Winning Game Plan

One of the best features about this strategy is its predictability. While anything can happen over the next few spins at any roulette wheel table, as you play longer using the strategy, the results become more and more predictable.

After playing hundreds of games in casinos as well as playing thousands of simulated games on computers, we determined that the hourly winnings were pretty much dependent on:

a. The speed of the game and
b. The size of your bets.

So long as you apply the strategy correctly, your hourly wins will fall within a narrow average.

Table 1 shows average hourly win rates as compared to the size of your buy-in and the speed of the game.

This is quite a variation in speed from a packed European style roulette table, a faster mostly empty American wheel and the still faster Internet roulette game.

The spin rate is a major determinate of your hourly win rate. Simply put, the slower the spin rate, the fewer the roulette decisions per hour and the slower your win rate.
For our purposes, we use the following average spin rates:

**Moderate Speed American Table - 60 spins per hour**

**Fast Online Casino - 350 spins per hour**

If you assume a constant spin rate, the amount you can win per hour is strictly dependent on the size of your bets, which is determined by your bankroll.

This is very straightforward and simply means that if you play using $5 chips for your base bets, you should expect to win more than a player betting with $10 chips. Likewise, the red $15 base bet player will average winning more than the $10 base bet player.

**Table 1. Win Rates Per Hour Comparing Spin Rates and the Size of the Betting Units**

<table>

</tbody>
</table>

Table 1 compares hourly win rates for 25-cent, $1, $2 and $5 base bet players at the different spin rates of 60 and 350 spins per hour.
These illustrations are based on the actual results obtained in hundreds of games played in real casinos. While this table, as well as the ones that follow, show the amounts you can win over different time periods with different amounts "invested" in each game, there is nothing hypothetical about the Double Cross Roulette winning rates. These amounts are based on actual casino games.

The first row of the table "Game Buy-in" shows you how much cash you will use to start a game at each level. For example, as a 25-cent bettor, you will use a game bankroll of $100 ($50 with a 100% Bonus from an online casino).

The next row of the table, the size of the "Base Bet," shows the size of the wagers you will use in an individual roulette game. These range from 25-cent minimum wagers all the way up to $25 bets, although this table only goes up to $5 base bets.

The beauty of this approach is its flexibility. For example, when you are first trying the system, you may want to use the lowest investment possible and start with 25-cent chips.

The hourly winnings vary depending on the number of spins per hour.

Let's follow the amounts for the $1 base better.

At a 60-spin per hour table a $1 base better will average net winnings of $149 per hour.

At a faster 350-spin per hour table, the same betting level will increase its average winnings to $868 an hour.

This is quite a variation in net winnings, from $149 an hour to $868 an hour, strictly dependent on the speed of the decisions.

This is a clear-cut example of why play in an online casino will maximize your hourly winnings.
Of course, the size of your buy-in and the size of your minimum base bets also influence your net hourly win. The highest hourly winnings shown in this table are $4,350 an hour for a $5 bettor playing online. These are very respectable winnings!

The next two tables illustrate how much you can make as a $1, $2, $3, or $5 base bettor, playing at either 60 spins or 350 spins per hour.

Table 2 shows the results of playing at a 60-spin per hour table, while Table 3 depicts the results of 350-spin per hour play.

Each table shows the amounts of hourly winnings for 1 hour, 3 hour, 4 hour and 5 hour sessions of play. For most players these would equate to daily sessions, so that you can think of Tables 2 and 3 showing daily winnings varied by speed, size of wagers and the time played.

</tbody>
</table>
Let's take a closer look at the Table 2. Here the win rates are shown for play in a typical American double-zero wheel played at a moderate rate of speed.

A $1 Base Bettor can expect to earn from $149 to $745 a day, playing from one to five hours.

A $2 Base Bettor can move up to winnings from $298 to $1490 a day.

At the $3 Bet Level the daily winnings move up to $446 for one hour's play to $2,230 for five hours "work."

Our $5 Base Bettor is facing some pretty healthy winnings. If he plays just an hour a day, he will average winning $745. For 3 hours of play, he will average over $2,980 and a full day of five hours play will move him up to $3,725 for a day's work.

You are probably wondering why I limit a casino workday to just 5 hours. Why not show 8 hours or even longer?

The answer is simple. Casino play takes its toll physically and psychologically.

So, at least in my experience, if you bang heads with the casino for three to five hours, lock up your winnings and walk out the front door a winner, you have put in a full day's work.

Double Cross Roulette is designed in such a way that you can start with very small wagers and gradually increase the size of your wagers as your bankroll grows from your net profits.

As you increase the size of your Base Bets your hourly winnings will grow.

Table 3 shows the hourly winnings grouped by columns, each representing a possible "day's work" for fast play. Think online casinos when you review Table 3.
Let's look at the winnings rates for a $25-cent bettor as shown in Table 3. One hour of play nets him $217 and 3 hours moves his play up to $651. A full day's work of five hours nets the 25-cent bettor a cool $1085. You could probably grow to like that.

Here, the higher-level play really pays off. The 50-cent Base Bettor's daily winnings of $2,170 are over $2,000 a day, moving this person into the $10,000 a week earning range for a five-day gambling week.

A $1 bettor, playing 5 hours a day is facing average winnings of $4,340 a day.

At this level, 7 days a month of online play will net you over $25,000 a month!

I know that many promoters will talk about how much you can make and throw total revenue amounts out as if they were "bottom line" amounts. I am giving you the true bottom line amounts that you can expect to remove from the casino. From these amounts you can deduct tips you pay the dealers and the costs of travel and staying in a casino location.
However, even if you stay in a suite costing $300 a night and only dine in gourmet restaurants, these costs will still be small compared to the amounts you can win using the Double Cross Roulette Strategy.

I can almost hear your mind calculating. Let me help you. Let’s take a look at how you might decide to move up from 25-cent Base Bets to $1 Bets and then make your way up to making $5 wagers.
Pumping Up Your Bankroll

One of the strongest benefits of learning the Double Cross Roulette Strategy is that you can use winnings from the casino to build your bankroll very quickly. Anyone who can raise a couple of hundred dollars can get started using this strategy to build a respectable gambling bankroll.

Starting with a $1 Base Bet, Table 4 shows how you can use casino winnings to increase the size of your bankroll. There is a lot of information packed into Table 4. Let's follow the first row of numbers across.

The left-hand column "Base Bets" shows the base size of the wagers you will make. I have used $1 as the lowest bet.

The next column "Session Bankroll" shows the game bankroll you need to properly play at each level of the strategy.

The third column "Amount won per hour" recounts the average hourly win at 60 spins an hour for each level of play.
Table 4. Time Required to Advance to Higher Base Bets at 60 Spins per Hour

</table>

The fourth column, "Bankroll to Play at Next Level" shows the bankroll needed to play at the next higher bet level. For example, to play at the $2 level, I am recommending that you have a gambling bankroll of $800.

The fifth column, “Target Win Amount” is the amount you need to win at each level before increasing you bet size to the next level. For example, as a $1 bettor you need to win $400 before you move up to $2 bets.

Take a look at the first row. Here the results for a $1 Base Bettor are shown. The Session Bankroll I recommend for this level is $400. Let's talk about what this means.

**The Session Bankroll is not the amount used to buy in for each game. Your Session Bankroll is the amount needed to protect you against unforeseen losses that are way beyond the limits normally experienced.**

**Double Cross Roulette's win rate of 100% of its grouped games will protect you.**

Let's get back to our $1 Base Bettor. He uses a $400 Session Bankroll. He has decided that he wants to move up to making $2
Base Bets. Now he wonders how much he has to win in order to meet the Total Bankroll Requirements for making $2 Base Bets.

The answer to this question is shown in column 4 "Total Bankroll Required." He needs to win enough to meet the Session Bankroll requirement of $800 for $2 bets, before he can safely increase the size of his base wagers from $1 to $2.

**Target Win Amount** is the amount that needs to be won before increasing the size of the bets.

The last column "**Playing Time to Move Up One Playing Level**" answers the next question the $1 Base Bettor probably has, which is "How long will it take me to make enough profits to move to the next level?"

In the case of the $1 Base Bettor, playing at a spin rate of 60 spins per hour, the answer is 2.7 hours.

We will go through the table from one Base Bet Level to another and see what we can learn.

If you look down the last column showing the average hours needed to move up a level, you will see that the jump from making $1 bets to $5 bets is the biggest. There is no reason that you couldn't divide this jump into yet another level and move from $5 to $10 bets.

**After playing several practice games at the $1 level, many players will want to move quickly to making $5 Base Bets. If you like you can start here. The only requirement to make wagers at any level is to cover the minimum suggest Total Bankroll.**
Table 5. Time Required to Advance to Higher Base Bets at 350 Spins per Hour

</tbody>
</table>

If you have $400 available for gambling, there is no reason you can't start at the $1 Base Bet Level. From this level to $2 Base Bets only takes one hour of play for at 350 spins per hour (Table 5).

The incentive behind making such a move is to increase your winnings per hour.

If you look back at Table 2, you can see just how valuable this option can be. Making $1 level bets you will average net profits of $149 an hour playing at a 60-spin per hour rate. By moving up to $2 Base Bets, your hourly net will increase to $298.

You might wonder where I have gotten all of these winnings amounts. These amounts were computed based on thousands of hours of actual casino play, both in land-based and Internet casinos. Over the very short term, you profits may vary considerably.

The key to success with this strategy is to follow the rules, which are presented in a clear, easy to follow, step-by-step fashion, and to remember that the longer you play, the closer your averages will come to ours.
Using our ti$1 Base Bets, you can move up to making $5 Base Bets in about six hours on the average playing at the 60-spin per hour rate. 

Table 5 shows the same information as Table 4 at the faster 350-spin per hour Internet rate.

At this rate of play, you can move from 25-cent bets to $2 wagers in about two hours play.

This seems even more significant when you consider that you will increase your bankroll from $100 to $800 while increasing your wager sizes.

Let me digress for a minute and tell you why it is so important that you have enough money set aside just for your gambling. Have you ever heard of "scared money?" Scared money is money risked you cannot afford to lose. It might be used for gambling or other speculative purposes like playing the stock market.

A key point in determining if the money is "scared money" is to ask yourself the question, "If I lose this money will it affect my lifestyle?" If the answer is yes, then you really shouldn't be gambling with this money.

Can you guess what happens when you play with scared money? You don't play correctly because you are afraid to lose. If you are afraid to lose, you will end up doing strange things like losing more than you should.

**With scared money on the line, you will be afraid to take a loss, because you really can't afford to lose any of the money.** So your behavior changes. When you have a losing game, you will be reluctant to take your lumps and pull off the table with a loss.

You may pull more money out and continue playing, because to quit playing would entail recognizing that you had lost money you couldn't afford to lose.
Once you fall into this trap, your discipline will rapidly disappear and you will find yourself chasing losses. That’s one of the things having an adequate bankroll of money especially set aside for gambling will help you overcome. **Having a "risk bankroll" is designed to protect you from losing control when you gamble.**

If you are willing to devote just a few hours a week to playing roulette you can move up to becoming a $868 an hour player in an amazingly short time period.
Planning and Reaching Your Profit Goals

I prepared Table 6 to help you make decisions on how you want to accomplish the goal of making a set amount of money each week, every month, or to reach the goal of making $250,000 a year!

Let's assume that you have practiced the Double Cross Roulette Strategy, seen how effective it is, and now want to use it to supplement your income. Table 6 shows some options on how you might decide to meet your goal.

Assume that you have decided that you can play roulette three days a week for three hours per day (nine hours invested in roulette). You will play three sessions in a local casino and play on making $10 Base Bets. Your goal is to make $2,000 a week.

Looking across the first row "Total Bankroll" gives us an idea of how much we have to have available to make $2,000 a week playing roulette for 9 hours.

If we look across the row for Weekly Winnings for 3 days at 3 hours per day, we see that as a $15 Base Bettor we can make $1,984 over nine hours of play and as a $20 Base Bettor we will average $2,646 for nine hours of play.

If we want to make $2,000 a week we will need to play longer than nine hours a week to reach our goal or make larger Base Bets. Moving down one row, we see that if we play just three hours more a week we can make $1,764 a week making $10 Base Bets.
If we don't want to play any more hours, or increase the size of our wagers at this time, then we should consider playing at this level until we accumulate enough additional winnings to move up to making $15 Base Bets. Once we reach the $15 base betting level, we can cut our play to about nine hours a week and still increase our winnings to $1,984 a week!

Table 6.
Winnings Compared by the Time Played and Bankroll at 60 Spins Per Hour

<table>
<thead>
<tr>
<th>Base Bet</th>
<th>$1</th>
<th>$2</th>
<th>$3</th>
<th>$5</th>
<th>$10</th>
</tr>

<tr>
<td>4 days/3 hrs per day</td>
</tr>
<tr>
<td>5 days at 4 hrs per day</td>
</tr>
<tr>
<td>5 days at 5 hrs per day</td>
</tr>
</tbody>
</table>

You can use Table 6 to estimate the amounts you will make under different time and money assumptions. If you want to make $5,000 every week playing roulette, you have several options.

You can play 5 days a week for four hours a day making $2 Base Bets and earn $5,960 a week..

You may prefer to put in less time and only play 4 days a week for 3 hours a day. As a $3 Base Bettor, you can do this and make $5,352 a week for your efforts.
If you compute annual returns the numbers really look interesting. Table 7 shows the average net income if you play 25 hours a week for 40 weeks per year.

**Table 7**

<table>
<thead>
<tr>
<th>Base Bet</th>
<th>$1</th>
<th>$2</th>
<th>$3</th>
<th>$5</th>
<th>$10</th>

<td>$238,400</td>
<td>$356,800</td>
<td>$596,000</td>
<td>$1,192,000</td>
</tr>
</tbody>
</table>

I will let you draw your own conclusions from the amounts shown in Table 7.

**By now you should have a pretty good idea how my protegees and I have set up regular income streams, sometimes in excess of $10,000 a week of pure profits, without any employees, overhead, business licenses or even the need to leave home! If you would like to join our group and become a winning Double Cross Roulette player, just follow this link -**

Maximizing Your Profits

Most people who have not experienced playing in casinos day in and day out believe that if you can make $100 a day in a casino, it is just as easy to make $5,000 a day.

If you look at the rate rates in Table 6, you can easily compute very high win rates. If you want to make about $10,000 a week, just move up to $3 Base Bets and play five hours a day, five days a week. Your winnings should average about $8,920 call it $9,000 as a rounded amount. If you play just forty weeks a year, this works out to $360,000 a year.

Although the Double Cross Roulette manual shows you a winning strategy, and this report will give you some ideas on how much you can make with the strategy, the Double Cross Roulette Strategy is not a get-rich-quick scheme. Even after you succeed at the lower levels of play, all kinds of complications come into play when you try to maximize your success by betting larger.

One factor you will have to contend with is your perceived constraint against playing and losing at higher levels. If you buy in for $2,000, you have to accept the possibility of losing two thousand dollars in a very short time period. Can you handle this?
Even though you know that loses have not occurred in extensive testing and that the system can overcome the effects of losses, what are you going to do the first time you buy in for $2,000 and lose $1,500 of it?

If you play the system correctly, mechanically you will know exactly what to do. And, if you follow the strategy correctly, this loss will most likely just be a temporary setback. It is no different than losing three hundred dollars in a $400 game. Or losing $37.50 if you buy in for $50.

One of the problems you will face as a $5 Base Bettor is that your play will come under constant scrutiny. The casino personnel will be watching your every move like a hawk, because the size of your play represents a real threat to the casino. Every win you rack up is giving the casino a loss, and the bosses don't like that. Even though you are playing a "negative expectation" game that the house feels secure about, nobody likes to lose. If you win too regularly and too consistently, it is just a matter of time before they intervene.

I made my own personal choice about gambling a long time ago. I prefer to play frequently at moderate levels. I will buy in with amounts from $1,000 to $2,500 typically and generally be satisfied with winning $500 to $1,500 per session. I play several times a month in local casinos and have almost zero heat. Even though I am a winner, I essentially play for fun.
Rules to Help You Keep Your Winnings

There is no question that if you follow the Double Cross Roulette Playing and Betting rules you will generate wins. I have even given you the average wins per hour achieved in actual play. Does this mean you can relax? Unfortunately no. Even though there is no question that you will win using this system of play, there is still the issue of leaving the casino with your profits in hand.

One of our most important rules to help you leave a winner is the 90% Rule. This rule says very simply that if you are close to hitting a target profit or a daily profit, that sometimes 90% or so is close enough.

I recall very well an acquaintance of mine who had a monster roll at a craps table. When I walked up to the table, Joe was rolling the dice and playing with $500 chips scattered all over the layout. By the time he sevens out, he was up over $48,000. This is not bad considering he bought in less than an hour earlier for a grand. I strongly urged him to come with me and take a break. I reminded him how badly he needed this score and how good he would feel walking out with his winnings intact. He nodded and smiled and then gave some lame excuse about wanting to bet with just a couple of more shooters.

I had more than made my nut for that day. In fact, catching the last ten minutes of his hot craps roll had put me way ahead. I decided to take a break in the coffee shop and try some of the coconut cream pie, which was reputed to be the best in town.
I ran into another friend and talked for over an hour. When I came back out, Joe was still at the same table. I walked up and noticed his pitiful little pile of green chips. Joe gave me a lame look and continued to play. I saw him the next day and asked him how he ended up. "Tapped out," were his words. "You didn't drop the whole 50 grand did you?" I asked.

"It was only 48 thousand," he responded. "The reason I kept playing is because I wanted to hit 50 thousand."

As I walked away, I wondered to myself what in the hell is the difference between 48 thousand and 50 thousand when you are that much ahead?

I think 48 thousand should have been close enough, don't you? Any time you are struggling to hit a target profit, are playing on a short time schedule or just start to hear that little nagging voice somewhere in the back of your skull telling you to watch out, you can remember Joe. He should have known that 48 grand was close enough. Don't ever get hung up on exact amounts. If you are trying to win $50 and hit $48, you can call it close enough and take a break. Remember, you will never go broke by taking a break early and walking off with your profits intact.

If you are not using the Double Cross Roulette Strategy, you're losing money. You can't lose if you order this strategy now. You can try the strategy at your leisure - in either your favorite land-based casino or on the Internet (don't worry if you don't know about Internet gambling, I'll show you how to do this). If you don't make at least $2,500 clear profit, I will cheerfully refund your money. [Click here](#) to order online now.
A Day in the Life of a Double Cross Roulette Player

Most gamblers are not very relaxed when they are in a casino. If you ever engage in a little people watching in a casino, you will notice that most casino patrons are not very happy.

The players I see do not look at all like the smiling people pictured in ads for casinos. In fact, most of them look kind of grumpy and unhappy.

If you catch them early enough, you might see an occasional smile. But after an hour or two or a day or two, the smiles turn downwards and start to look more like grimaces.

The reason behind this is quite simple. They arrived with high expectations of winning (psychologists tell us that most players expect to win regardless of their previous bad experiences). Now, grim reality has set in. Their sunny expectations have been replaced by the sad truth that they are doomed to lose again.

If a person has been playing non-stop for hours, you might even witness blood shot eyes in addition to the drooping jowls.

Now, let's take a look at a Double Cross Roulette player. This person will be relaxed and will most likely exude confidence.
He or she will seldom be in a hurry or look harried in the least. This player looks like he has all the time in the world to play and is not jumping to the casino's beat.

A Double Cross Roulette Player will calmly stroll over to a roulette table and, if there is room, confidently take a seat and exchange his cash for chips.

He may concentrate for a few minutes while using the strategy to its full advantage. Soon, more chips will accumulate on his side of the table. After about twenty or twenty five minutes our Double Cross Roulette player will count his chips and ask the dealer to change them for larger chips.

He will then leave the table. He might head for the coffee shop or just stroll around the casino, seeing if anyone else has a winner's look.

If it is early in the day, he will probably be back in a few minutes and repeat the experience. If he is in a location with lots of
casinos within a short distance, he may decide to move to the
next casino and play there for a while.

If it is later in the day, or our player is ready for a break, he may
decide that no more play is needed.

If you've already decided to order this powerful complete
course and toolkit, click here now and I'll even throw in Five
Big Bonuses Worth $200.00!

You get a full year to try it out at my risk. If the Double
Cross Roulette Strategy somehow fails you (and it hasn't
failed to perform yet), just send me an e-mail and I'll make
sure that you are refunded every penny you paid - promptly
and courteously!

However, if you are still not convinced, and you'd like to
read more about how others have done using this system,
just keep reading . . .

Many of our players like to set daily goals and then quit playing
as soon as the goal is hit.

Play for the Double Cross Roulette Player playing at home will
be even more relaxed. Many days I will get in a short game or
two before supper, then play one more game before going to bed.
If I feel sharp when I first rise, I may knock down a game while
sipping my first cup of coffee.

Because everything is done automatically, the Double Cross
Roulette player is probably the most relaxed player in a
casino. Or if he is playing on his home computer, he may well
be sipping a soothing cocktail while playing or dipping chips
into a spicy dip between virtual wheel spins.

There is no reason to ever become agitated using this strategy.
While the occasional loss can be irritating, it is so rare and so
small that it is no more than a minor disturbance. Let me be even more specific about this.
You Need Never Fear Losing With This Strategy. Losses Are No More Than Tiny Bumps on Your Highway to Success

I don't know about you, but I really hate to lose. I mean really hate it. I think a lot of people share this trait. Unfortunately playing with lousy systems or no system at all, they are stuck with a seemingly never-ending series of losing games.

Here's a really important point. Unlike some systems, like Martingale for instance, which have large losses, the Double Cross Roulette's losses are very nonexistent!

Picture This: It's three months from today and you've made over $75,000 in your learning phase. You have spent $50,000 of your winnings rewarding yourself. Wisely, you reinvested the rest of your profits so that now you can increase your hourly win rate (I'll show you exactly how to do this).

You have now settled into a routine. You play online three nights a week for an hour or two at a time. Once a month, you take a short drive to the nearest casino and play for a day.

Your total time commitment is much less than you might have
spent watching worthless TV programs, surfing the Internet looking for elusive profitable opportunities or just "wasting time."

Instead of frittering your precious leisure time away, you have found a fascinating and incredibly profitable new way to spend some extra time. You spend it bringing in $35,000 to $50,000 a month in the most pleasurable way possible - Taking Money From Casinos That Don't Know How to React to a Trained Professional Like Yourself!

Now, stop and think back to today and consider your options. You can close this web page right now and never have the chance to become a Roulette Entrepreneur.

You can search for the perfect MLM opportunity or try making money with a web site.

Most MLM programs only make money for the persons who start them and marketing on the Internet is like marketing anywhere else. Regardless of what you have heard, it requires lots of time and money to make any money at all marketing online.

You can easily flounder around for years trying and failing at different systems or so-called opportunities.

Another option to consider is buying a franchise. If you have the money, the time, and can handle the risk of possibly losing everything you have, then you may want to consider this route.

However, Your Best Option May Be the One You Are Reading About Right Now!

The Double Cross Roulette Strategy is undoubtedly the safest and least expensive of the alternatives facing you. What's more, you can even try it for a Free Trial with zero risk.
Why not give it a free trial now? Just click here to embark on what may be your most interesting journey.
