Preface

The Guderian Progression is a powerful new way of playing roulette. This manual is a supplement to the Guderian Progression Player’s manual. The purpose of this manual is to show you how quickly and easily you can use this strategy to win $9,128 starting with as little as $60.

*The Guderian Progression* is a mathematically proven strategy that will gain an edge over every version of roulette offered today!

What’s more, it is so versatile, that –

A physical wheel is not even necessary. This strategy beats online and video versions of roulette just as well as the physical games.

No tracking, counting or observing is needed to find a beatable wheel. Every wheel will immediately become your “personal ATM” when you use *The Guderian Progression*!

You won’t have to write down long strings of roulette decisions to get started. This strategy is so effective that all you only have to observe three or four spins to start playing and winning. The strategy itself will put you on the winning path!

If you have not yet downloaded The Guderian Progression, you can read more about it here – www.GamblersBookcase.com/GuderianProgression/
Introduction

The Guderian Progression is not some theoretical system that I dreamed up like many of the systems offered by others.

It is not just a system that I played on paper for a few games and am trying to pass off as a winning system.

It is not a system that I was lucky with a couple of times that I am now trying to peddle as a proven winner, when all it did was win a few games!

There is nothing theoretical or unproven about The Guderian Progression! I have records of 5,544 games played in real casinos backing up everything I am telling you!

This is a thoroughly tested and 100% proven system that beats every version of roulette offered today!

What’s more, there are no hidden gimmicks behind the system’s proven win record.

You don’t have to look for certain games or try to time your entry and departure.

All you have to do is start playing at any roulette game. It doesn’t matter if the game is played on a real wheel in a land-based casino or played in cyberspace in an online casino.

You are going to beat the game.

You are going to beat it decisively!

And, you are going to win higher amounts at a faster rate than any of the experts ever thought possible.

In short, you are going to win huge amounts making small bets and do it at breakneck speed!
Just How Good is This Strategy?

Probably the best test of a gambling’s strategy’s effectiveness is to compare net winnings with the amount of money at risk. Let’s take a look and see how The Guderian Progression measures up. This strategy offers so many benefits that it is hard to know where to start.

First, it is the only roulette strategy that first targets bets most likely to win and then overlays the bets with the unique Guderian Betting Progression. This powerful combo of bet selection and bet sizing puts this strategy head and shoulders above other strategies.

You can get started with just a $60 buy-in playing online And, if you follow the steps shown in this manual, you will increase your bankroll to $9,128 in just three hours. This is incredible but true. For little more than the cost of a movie for two you can get started on the most profitable venture of your life! With your $60 buy-in you will start out making 25-cent bets in any of our “Top Pick” online casinos I will reveal to you. And, your pay will be pretty good.

Our long-term testing proves that you will average making $282 an hour as a 25-cent better.

If you compare these average winnings with the amount of money you have to put up you can see why every one of our players was just blown away by this strategy.

So – For an $60 investment you will pull in $282 an hour. Sounds like a deal to me. [The game bankroll required for 25-cent betting is $125. However, you can get started with just $63 as many online casinos will give you a 100% bonus of $63 just for opening an account.]

Want a raise?

It is very easy to increase the level of your play with this strategy.

You will have tremendous incentive to scale up your play as quickly as you can.
Here’s why – When you move up to making 50-cent bets you will get a terrific raise. You will now be making an average of $565 an hour. And, your buy-in for this level of play is just $250.

You will want to continue on this path of ever expanding profits.

As a $1 bettor you will make a $1131 an hour. And, yes, you can do this with a buy-in of just $500

One of the most popular levels of play for our online players is playing with $2 minimum bets.

The buy-in is only $1,000, while the winnings are pretty awesome.

We have documented the average winnings for a $2 bettor at $2262 an hour!
A Plan to Turn $60 Into $9,128 in Three Hours!

Can you imagine turning $60 into $9,128 in three hours?

What if you could do this safely and easily?

You would have to admit that this would be a truly amazing accomplishment.

But, this is exactly what you will do when you use the Guderian Progression and play online.

You will get started making 25-cent bets with a $60 buy-in. [The game bankroll required for 25-cent betting is $125. However, you can get started with just $63 as many online casinos will give you a 100% bonus of $63 just for opening an account.]

Then, you will increase the size of your bets as your winnings build.

It will only take you 26 minutes to move up from making 25-cent bets to making 50-cent wagers. And, as a 50-cent bettor you will make $565 an hour!

Now all you have to do is follow the exact steps in this manual.

This plan has worked for our players and it will work for you too!

And, here is the best part of all.

All you have to do is follow our instructions.

In just three hours you will turn $60 into $9,128!

Of course, there is nothing to prevent you from doing this over and over. Or, you can continue to play at a higher level and pull in winnings that have to be experienced to be believed!
Comparison of Winnings In Land-Based and Online Casinos

The rates of play are different in land-based and online casinos. In a land-based game will be dealing with other players and a human dealer. These games are played at slower rates. The average speed of a roulette table in a land-based casino is about 60 spins per hour.

The speed of the game in online casinos is much faster than the land-based games. Typically in an online game, the player is playing against the computerized dealer and the speed is mostly controlled by how fast the player plays. Skilled players can easily play 300 spins per hour. For our purposes we will use 300 spins per hour as the online casino rate of play.

The minimum bets in land-based casinos are much higher than those in online casinos. While there are many online roulette games accepting 10-cent minimum bets, most land-based games have $5 or higher minimum wagers.

Let’s start with the land-based game. Table 1 shows hourly winnings at 60 rounds per hour. The minimum bets are 25¢, 50¢, $1, $2, $3, $5, $8 and $10 Base Bets.
Table 1. Hourly Winnings at 60 Spins per Hour
(Assumed Rate of Play in Land-based Casino)

<table>

<td>$5000</td>
<td>$2262</td>
</tr>
</tbody>
</table>

The interpretation of this table is very simple. Let’s take play with 25¢ Base Bets for example.

If you are a $1 player you will need a $500 buy-in to play at this level. Your win rate, on the average, will be $226 an hour. Incidentally, when I show hour win rates, I am showing you Net Winnings per hour. These amounts are net of expected losing games. If you have a series of winning games, you very well can have higher winnings per hour. Conversely, if you have a losing game, your hourly win rate for that hour will be lower.

Table 2 shows hourly winnings for play in an online casino, with 300 spins per hour played.
Let’s take a look at what you can expect if you are a 25¢ bettor, playing roulette online using the Guderian Progression.

You will only need $125 as your game buy-in. With many online casinos offering 100% match bonuses, you could deposit just $63 and use the matching bonus of $63 giving you $126 to start.

At this playing level you can expect to win $282 an hour in *Net Winnings*. For one hour of play you will win $282.

In each of the plans which follow our target wins for each level of play are the amounts needed for the Game Bankroll or buy-in for each level of play. If you want to modify the plan to provide a greater margin of safety you should have two times the amount of the Game Bankroll for each level before moving to the next level. To modify the tables which follow you will need to multiply the Cash at the End of the Session by 2 and then play longer until you win this amount.
Turning $60 Into $9,128 Online

The easiest way to turn $60 into $9,128 online is to follow the plan we are going to present.

This chapter shows you how to win $9,128 in three hours playing online using the Guderian Progression online.

The next chapter shows you how to win $9,128 playing in land-based roulette games.

The win rates used for play in both online and land-based games are based on average net wins in games we played and documented.

You may win at a slightly different rate or may suffer a set back in the form of several consecutive losing games.

On the other hand you can easily win at faster rates then our averages.

The most important aspect of these plans is to never play beyond your bankroll requirements.

Table 3 shows the bankroll needed for each level of play. Throughout our plans to make $9,128 in profits we adhere to the Game Bankroll Requirements.

Each of our plans to win $9,128 based on the premise that you must win enough to play at a higher level before you increase the size of your bets.

For example, if you start with 25¢ bets playing online, you can buy-in for $125. [The game bankroll required for 25-cent betting is $125. However, you can get started with just $63 as many online casinos will give you a 100% bonus of $63 just for opening an account.]

To move up from making 25-cent bets to 50-cent bets you will need a bankroll of $250.

For online play we will assume that you start with a buy-in of $125 and make 25¢ bets
Your goal is to increase the size of your bets as soon as you have won enough to qualify to play at the next higher bankroll level.

Table 3 summarizes the plan to win $9,128 playing roulette online.

</table>

This is the key for this table:

**Bet Level** – The minimum bet at each level of play

**Game Bankroll** – The buy-in (cash) needed for each level of play.

**Win Target** – the amount needed to play at the next level.

**Hourly Win Rate**- Average winnings per hour for that level of play

**Playing Time to Hit Target** – the time needed to hit win enough to play at the next level.

**Bankroll After Win**– the bankroll at the end of each level of play.

Let’s go over a couple of levels of play to make sure that you follow what we are doing.
We start play making 25-cent Base Bets as shown in the first row in the table. We begin with a total bankroll of $125. Our first objective is to win $125 and increase our Total Bankroll to $250 – the level needed to make 50-cent Base Bets. With a Win Rate of $282 an hour it takes us .44 hours (about 26 minutes) to win $125 and accumulate a total bankroll of $250.

Following along in the table, we see that after moving up to making 50-cent bets, we make enough in another 0.44 hours of play to move up to making $1 bets. From 50-cent betting we move up to $1 betting in 44 hours (about 26 minutes).

And so we continue.

In this scenario I assume that $5 Base Bets are the largest you make. You can find many online casinos that will accept larger wagers. However, here I assume that $5 Base Bets are as high as you go.

Following this plan we increase our starting buy-in of $125 to $9,128 in just three hours.

When you follow this plan don’t play too long at a time. I find that about an hour of online play at a time is all that I can take without taking a break.

You can discover your own preferred rate of play. However, with the ultra-high win rate of the Guderian Progression, you don’t have to be in a hurry. Even playing leisurely you can quickly win $10,000, or more in a day’s play!

This plan is based on following the recommendation of upgrading your play as shown in the table. We kept track of the play of a number of our players who followed this plan and found that it took the average player about 3.2 hours of play to make a profit of $9.128

We analyzed their play to see why it took them longer to win $9,128 than our plan shows. The answer quickly became apparent –

The average player stayed longer at each level than we recommend. Many players stayed at the $1 Base Betting level much longer than was necessary. We talked to them about
this and found that many of them were reluctant to increase the size of their bets above $1.

The disparity between our plan and the average results of the players shouldn’t give you any concern. It didn’t take the average player longer to win $9,128 because of any flaws in the plan. It was due to player reluctance to increase the size of their bets in accordance with the plan.
Playing in Land-based Casinos

For play in land-based casinos we will assume that you start with a buy-in of $500 and start out making $1 Base Bets. With the Guderian Progression you will always wager at least three times the Base bet, so that your total wager on inside bets would be $3. If the casino where you are playing requires $5 minimum bets, you can wager $5 on red of black whenever your inside bets total less than the table minimum.

In implementing this plan, your goal is to increase the size of your bets as soon as you have won enough to qualify to play at the next higher bankroll level.

Table 4 summarizes the plan to win $9,128 playing roulette in land-based casinos.

The key for this table is the same one as was used for play in online casinos.

I’ll review the first two levels of play to make sure that you understand this table.

We begin by buying in for $500 for $1 play. The first row summarizes our play as a $1 bettor. Our objective is to increase our total bankroll by $500 so that we have a large enough bankroll to move up to $2 Base Betting.

It will take about 2.21 hours (about two hours and thirteen minutes) to move up from $1 to $2 Base Bets. It will 1.1 hours (about one hour six minutes) of play as a $2 Base Bettor to win enough to qualify making $3 Base Bets.

The table continues in this manner and shows that 9.28 hours (rounded to 9.5 hours) of play are needed to win $9,128.

Even though our plan indicates that you can win $9,128 in 9.5 hours, we found that it took our average player following this plan about 11 hours to win $9,128.

This is the same pattern that occurred with online players. The longer time required to win $9,128 in each case was due to players’ reluctant to increase the size of their wagers as quickly as indicated in the plan.
### Table 4. Building $9,128 at 60 spins per hour
(Assumption – Play in land-based casinos starting with $1 minimum bets)

<table>
<thead>

<td>$500</td>
<td>$500</td>
<td>$226</td>
<td>2.21 hrs</td>
<td>$1000</td>
</tr>
<tr>
<td>$2</td>
<td>$1000</td>
<td>$500</td>
<td>$452</td>
<td>1.10 hrs</td>
<td>$1500</td>
</tr>
<tr>
<td>$3</td>
<td>$1500</td>
<td>$1000</td>
<td>$678</td>
<td>1.48 hrs</td>
<td>$2500</td>
</tr>
<tr>
<td>$5</td>
<td>$2500</td>
<td>$2500</td>
<td>$1131</td>
<td>2.21 hrs</td>
<td>$5000</td>
</tr>
<tr>
<td>$8</td>
<td>$5,000</td>
<td>$4,128</td>
<td>$1809</td>
<td>2.28 hrs</td>
<td>$9,128</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$5,000</strong></td>
<td><strong>$4,128</strong></td>
<td><strong>$1809</strong></td>
<td><strong>9.28 hours</strong></td>
<td><strong>$9,128</strong></td>
</tr>
</tbody>
</table>

If you follow the plan for either online or land-based play there is no doubt that you will be able to win $9,128 starting with minimum bets and small bankrolls. The actual amount of time that it takes you may be longer than the times shown in the tables. However, this is not too much of a drawback if you think about it. If it takes you 11 hours to win $9,128 playing in land-based games instead of the 9.5 hours shown in the plan it is still a great accomplishment!
Rules to Help You Keep Your Winnings

There is no question that if you follow the Guderian Progression Strategy you will generate wins. I have even given you the average wins per hour achieved in actual play. Does this mean you can relax? Unfortunately no. Even though there is no question that you will win using this system of play, there is still the issue of leaving the casino with your profits in hand.

One of our most important rules to help you leave a winner is the 90% Rule. This rule says very simply that if you are close to hitting a target profit or a daily profit, that sometimes 90% or so is close enough.

I recall very well an acquaintance of mine who had a monster roll at a craps table. When I walked up to the table, Joe was rolling the dice and playing with $500 chips scattered all over the layout. By the time he sevened out, he was up over $48,000. This is not bad considering he bought in less than an hour earlier for a grand. I strongly urged him to come with me and take a break. I reminded him how badly he needed this score and how good he would feel walking out with his winnings intact. He nodded and smiled and then gave some lame excuse about wanting to bet with just a couple more shooters.

I had more than made my nut for that day. In fact, catching the last ten minutes of his hot craps roll had put me way ahead. I decided to take a break in the coffee shop and try some of the coconut cream pie which was reputed to be the best in town.

I ran into another friend and talked for over an hour. When I came back out, Joe was still at the same table. I walked up and noticed his pitiful little pile of green chips. Joe gave me a lame look and continued to play. I saw him the next day and asked him how he ended up. "Tapped out," were his words. "You didn't drop the whole 50 grand did you?" I asked.
"It was only 48 thousand," he responded. "The reason I kept playing is because I wanted to hit 50 thousand."

As I walked away, I wondered to myself what in the hell is the difference between 48 thousand and 50 thousand when you are that much ahead?

I think 48 thousand should have been close enough, don't you?

Any time you are struggling to hit a target profit, are playing on a short time schedule or just start to hear that little nagging voice somewhere in the back of your skull telling you to watch out, you can remember Joe. He should have known that 48 grand was close enough. Don't ever get hung up on exact amounts. If you are trying to win $50 and hit $48, you can call it close enough and take a break. Remember that you will never go broke by taking a break early and walking off with your profits intact.

Whenever you are somewhere near your target profit for a game, you need to make some changes. Obviously you can just call the game over and quit. However, if the dealer has been busting at a high rate and the table is definitely player favorable, it makes no sense to quit. So you do the next best thing. You move into the conservative betting mode.
**Living a Life of Ease**

When you go to the casino, you need to remember that your one purpose is to win. You can drink, party, visit, flirt and relax on your own time after you have locked up your daily win. After becoming a proficient roulette player and increasing the size of your minimum wagers, you will be able to travel a good part of the year, courtesy of your favorite casinos. This may become an important part of your retirement plan. You can use your new skills at roulette to pay for your vacations and pocket a good deal of change as well.

You may consider becoming a full time pro. Before you make this step, I want you to think about it very carefully. Whereas playing several times a month and winning can bring you a great deal of pleasure, having to play every day to make your daily nut is very difficult.

Casinos can be glamorous and exciting if you don't have to be in one every day. On a daily basis, I can think of many things I had rather do than go through the repetitive grind of play needed to hit my daily win goal. Everyone is different. If you think you would like to turn pro, I suggest you take a two week vacation and spend at least ten of the days in a casino playing roulette four hours a day. If, after two weeks of this, you are still game for more, then maybe you have what it takes to become a full time player. If you are like me, you may have to settle for being a part time pro and playing less frequently.
I hope you find the Guderian Progression to be a lifetime source of income and satisfaction. I would like to hear about your experiences. You may write me in care of the publisher. I wish you the best in all of your life endeavors.
