## **Introduction**

Originally developed for baccarat, Six-Bet Betting throws off winnings like crazy. This manual is a supplement to the Six-Bet Betting manual. The purpose of this manual is to show you how quickly and easily you can use the Six-Bet Betting System to set up your own \$10,000 a week income!

## **Baccarat Is the Number One Casino Game You Should Play If You Want High Profits With Low Risk!**

Once you start playing baccarat using the *Six-Bet Betting System*, I am confident that playing baccarat will become your **Number One Source of Cash!**

Before I tell you more about the strategy, let's take a look at the game itself –

Baccarat should become your game of choice because it offers the lowest house edge of any of the casino table games.

Most blackjack players fight a game where the odds constantly change and are lucky to get the house edge down to one-percent advantage over them.

Craps is a great game. Pass line, come, don't pass and don't come bets only give the house an edge of 1.4%. However, there are bets in this game that give the house a tremendous edge. I am talking an edge of 14% to 17% on each wager! **Craps for the average player quickly becomes a money pit!**

Roulette is the number one game of choice for many players.

However, with the American double-zero wheel, players give the house an edge of over 5%.

Even playing the European version of the game, players give up over two percent house advantage on most bets.

Video poker is a great game if you can find the best machines. However, your casino may not have the best paying machines. And, if you are playing on an inferior machine, this game becomes a real mother to beat.

That leaves baccarat.

Baccarat offers a house edge of slightly over one percent. And, that's without any strategy at all!

Blackjack players have to memorize basic strategy and then manage their bets very well to do this well.

Craps players have to limit their bets and then use a very sound money management strategy to keep the house edge under 1.5%.

Baccarat players in a sense have it made. All they have to do is bet on either Player or Banker.

And, bingo! They have the house edge down to about one-percent!

## **Because the Game is So Simple, Most Players Underestimate What is Required to Win at Baccarat.**

I could train a monkey to play baccarat. All he would have to learn is to put chips on either the Banker or Player betting spots. That's it. He would be playing at least as well as most players.

And, he would probably win a great deal of the time. However, without any strategy, even the low house edge would take its relentless toll and like most players the monkey would eventually lose.

But, it doesn't have to be that way. I have discovered a way to turn the game of baccarat into a game where you will win 92% of the time.

Let's find out how –

## The Two Baccarat Decisions You Have to Make

Playing baccarat consists of making just two decisions –

**Where do you place each bet and**

**How much do you bet each time.**

That's it. All you have to do to beat the game is come up with a superior way of determining where to bet and how much to bet and you will have a source of cash that is unending.

And, *Six-Bet Baccarat* has unique breakthrough solutions to both sides of playing and beating this game!

## **Would You Like Some Examples of What You Can Do With The Six-Bet Baccarat Strategy?**

If you are very cautious you can take a starting bankroll of just \$35 and get started making more money than you ever have before!

**I know this sounds crazy, but it is a documented fact –**

You can start with a \$35 buy-in making \$5 bets in on online casino. Play for just a few hours and you will win enough to start making \$25 bets online.

As a \$25 online bettor, you can easily pull in \$645 an hour in pure profits.

And you can do this with great confidence because of this strategy's extraordinary 92% win rate.

Keep up your online play and you will quickly move up to making \$50 bets. At this level of play you will bring in a mind boggling \$1,290 an hour in profits!

You might be thinking these are theoretical numbers –

Maybe something that came out of some kind of computer simulation.

***If you are thinking this you are wrong. These are real win amounts, won by players just like you.***

## How This Manual Will Help You

To understand how to use the *Six-Bet Baccarat Strategy*, you will need to read the manual and practice using the strategy.

**The goal of this manual is simple – to help you set up your own baccarat system using *Six-Bet Baccarat* to make at least \$10,000 or more every week!**

## Hourly Winnings

One of the best features about Six-Bet Baccarat is its predictability. While anything can happen over the next few hands at a baccarat table, as you play longer using the strategy, the results become more and more predictable.

After playing thousands of games in casinos as well as playing thousands of simulated games on computers, we determined that the hourly winnings were pretty much dependent on:

- a. **The speed of the game and**
- b. **The size of your bets.**

**So long as you apply the strategy correctly, your hourly wins will fall within a narrow average, which is very predictable.**

Assuming an average table speed of about 60 hands per hour for play in a land-based baccarat game and 250 hands per hour for online play, the amount you can win per hour is strictly dependent on the size of your bets, which is determined by your bankroll.

This is very straightforward and simply means that if you play with black \$100 chips, you should expect to win more than a player betting with green \$25 chips. Likewise, the green chip player will average winning more than the red \$5 chip player.

Table 1 shows the relationship between hourly winnings and the level of bankroll used at a table averaging 60 bets per hour, the average rate of play for land-based games. **These illustrations are based on the actual results obtained in hundreds of games played in real casinos.**

While this table, as well as the ones which follow, show the amounts you can win over different time periods with different amounts "invested" in each game, **there is nothing hypothetical about Six-Bet Baccarat winning rates. These amounts are based on actual casino games.**

The top row of the table shows the minimum bet needed for each level of bankroll. This table shows minimum wagers of \$5, \$10, \$15, \$25, \$50, \$100, \$200 and \$500.

The second row matches up the amount you will use for each game with the minimum bet. If you are a \$5 bettor, you will need to buy in for at least \$35. A \$10 bettor will use \$70, and so on.

If you look in the column under \$35 buy-in, you will see the average amounts you can expect to win if you play Six-Bet Baccarat at the levels appropriate for this level of buy -in. ***The Six-Bet Baccarat* manual completely discusses the strategy, relating the amounts you will win to the levels of bets used.**

The first amount under \$35 is \$31, the amount you will average winning per hour at this level of play. Please note that you will not win this amount per hour every hour you play. If you have only winning games, you will win more. If you have a losing game, you will win less. This is an average. **The longer you play, the closer your results should be to this average.**

### Hourly Winnings at 60 Bets Per Hour (Typical Speed of Land-based Casino)

<i>Minimum Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$25</i>	<i>\$50</i>	<i>\$100</i>	<i>\$200</i>	<i>\$500</i>
<i>Game Bankroll</i>	\$35	\$70	\$105	\$175	\$350	\$700	\$1400	\$3500
<i>Average Winnings Per Hour</i>	\$31	\$62	\$93	\$155	\$310	\$619	\$1238	\$3096
<i>3 Hours Play</i>	93	186	279	465	930	1857	3714	9288
<i>4 Hours Play</i>	124	248	372	620	1240	2476	4952	12384
<i>5 Hours Play</i>	155	310	465	775	1550	3095	6190	15480

The next amount under \$35 is \$93, the amount you would average for three hours of play. I consider anywhere from three to five hours a day a full day's work in a casino. Before you discount this statement, remember we are talking about risking your money in an atmosphere strictly geared to make the removal of your money as painless as possible. Beating the casino at its own games is never a cakewalk, and the shortest amount of time you take to do so will help you reduce the effect of the many psychological ploys the casino has devised to relieve you of your money.

**So, at least in my experience, if you bang heads with the casino for three to five hours, lock up your winnings and walk out the front door a winner, you have put in a full day's work.**

Anyway, getting back to Table 1, with a \$35 buy-in, you can win \$93 if you play for three hours, \$124 if you play for four, and \$155 if you stick it out five hours. **As you increase the size of your buy-ins, your base bets will increase and your hourly winnings will grow.**

**With a \$3,500 buy-in, you can win over \$15,000 a day if you play five hours.**

## **Comparison of Winnings In Land-Based and Online Casinos**

The rates of play are different in land-based and online casinos. In a land-based game will be dealing with other players and a human dealer. These games are played at slower rates. The average speed of a mini-baccarat table in a land-based casino is about 60 rounds of play per hour. This is a realistic rate of play for land-based games are based on 60 rounds of play per hour.

The speed of the game in online casinos is much faster than the land-based games. Typically in an online game, the player is playing against the computerized dealer and the speed is mostly controlled by how fast the player plays. Skilled players can easily play 300 rounds per hour. For our purposes we will use 250 rounds per hour as the online casino rate of play.

The minimum bets in land-based casinos are much higher than those in online casinos. While there are many online baccarat games accepting \$1 minimum bets, most land-based games have \$5 or higher minimum wagers.

We want to refine our estimates of hourly winnings using Six-Bet Baccarat in this chapter. To do this we will look at the win rate in land-based and online casinos separately.

Let's start with the land-based game. Table 2 shows hourly winnings at 60 rounds per hour. The minimum bets are \$5, \$10, \$15, \$20, \$25, \$35, \$50, \$75, \$100, \$200, \$500 and \$1000.

**Table 2. Hourly Winnings at 60 Hands per Hour  
(Assumed Rate of Play in Land-based Casino)**

<i>Min Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$20</i>	<i>\$25</i>	<i>\$35</i>	<i>\$50</i>	<i>\$75</i>	<i>\$100</i>	<i>\$200</i>	<i>\$500</i>	<i>\$1000</i>
<i>Game</i>	\$35	\$70	\$105	\$140	175	245	350	525	700	1400	3500	7000
<i>Buy-in</i>												
<i>Bankroll Needed</i>	175	350	525	700	875	1225	1750	2625	3500	7000	17500	35000
<i>Hourly Winnings</i>	\$31	\$62	\$93	\$155	\$310	\$619	\$1238	\$3096	\$31	\$62	\$93	

The interpretation of this table is very simple. Let's take \$5 play for example.

If you are a \$5 player you will need a \$35 buy-in to play at this level. Your win rate, on the average, will be \$31 an hour. Incidentally, when I show hour win rates, I am showing you Net Winnings per hour. These amounts are net of expected losing games. If you have a series of winning games, you very well can have higher winnings per hour. Conversely, if you have a losing game, your hourly win rate for that hour will be lower.

Getting back to the table, as a \$5 player, you can expect to make \$31 for on hour of play, \$93 for three hours play, \$124 for four hours and so on.

Table 3 shows hourly winnings for play in an online casino, with 250 rounds per hour played.

**Table 3. Hourly Winnings at 300 Hands per Hour  
(Assumed Rate of Play in Online Casino)**

<i>Min Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$20</i>	<i>\$25</i>	<i>\$35</i>	<i>\$50</i>	<i>\$75</i>	<i>\$100</i>	<i>\$200</i>
<i>Game Buy-in</i>	\$35	\$70	\$105	\$140	175	245	350	525	700	1400
<i>Bankroll Needed</i>	175	350	525	700	875	1225	1750	2625	3500	7000
<i>Hourly Winnings</i>	129	258	387	516	645	903	1290	1925	2580	5160

Let's take a look at what you can expect if you are a \$5 bettor, playing baccarat online using Six-Bet Baccarat.

You will only need \$35 as your game buy-in. With many online casinos offering 100% match bonuses, you could deposit just \$18 and use the matching bonus of \$18 to reach the needed Game Bankroll of \$35.

At this playing level you can expect to win \$129 an hour in *Net Winnings*. For one hour of play you will win \$129, two hours, \$258, three hours, \$387 and so on.

## Time and Money

Tables 4 and 5 are set up to help you make a decision on how you want to accomplish the goal of making a set amount of money each week, every month, or any other time period you want to use.

Let's assume that you have practiced Six-Bet Baccarat, seen how effective it is, and now want to use it to supplement your income. These tables show some options on how you might decide to meet your goal.

**Table 4. Winnings Based on Time Played and Bankroll Used for Play in a Land-based Casino**

<i>Minimum Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$25</i>	<i>\$50</i>	<i>\$100</i>	<i>\$200</i>	<i>\$500</i>
<i>Game Bankroll</i>	\$35	\$70	\$105	\$175	\$250	\$700	\$1400	\$2800
<i>Average Winnings Per Hour</i>	\$31	\$62	\$93	\$155	\$310	\$619	\$1238	\$3096
<i>10 Hours a Week</i>	310	620	930	1550	3100	6190	12380	30960
<i>20 Hours a Week</i>	620	1240	1860	3100	6200	12380	24760	61920
<i>30 Hours a Week</i>	930	1860	2790	4650	9300	18570	37140	92880

**Table 5. Winnings Based on Time Played and Bankroll Used for Play in an Online Casino**

<i>Min Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$20</i>	<i>\$25</i>	<i>\$50</i>	<i>\$75</i>	<i>\$100</i>	<i>\$200</i>
<i>Game Bankroll</i>	\$35	\$70	\$105	\$140	\$175	\$250	\$700	\$1400	\$2800
<i>Average Winnings Per Hour</i>	\$129	\$258	\$387	\$516	\$645	\$1290	\$1935	\$2580	\$5160
<i>10 Hours a Week</i>	1290	2580	3870	5160	6450	12900	19350	25800	51600
<i>20 Hours a Week</i>	2580	5160	7740	10320	12900	25800	38700	51600	103200
<i>30 Hours a Week</i>	3870	7740	11610	15480	19350	38700	58050	77400	154800

You can easily determine the relationship between the size of your bets and your weekly earnings using these tables.

Let's assume that you prefer playing in a local casino. You decide to play making \$25 bets.

Table 4 shows you that if you play baccarat 30 hours a week you will make \$4,650.

You probably don't want to spend that much time playing baccarat. Looking at the same table, you see that making \$50 bets you will make \$6,200 for 20 hours play.

While this sounds better than playing for 30 hours, looking at the column for \$100 play, you can see that this offers a much better return for your time –

Ten hours a week of making \$100 minimum wagers will bring in \$6,190 on the average.

Moving up to making \$200 bets is even better. At his level, ten hours a week of play really pays off with \$12,380 in winnings.

Since online baccarat is a much faster game, the hourly winnings are much higher than for comparable levels of play in a land-based casino.

Looking at Table 5, you can see that making \$5 bets online and playing 30 hours a week will bring you \$3,870 a week for your efforts.

However, you probably won't want to play 30 hours a week online. That's why you will want to move up in play as quickly as possible.

Once you move up to making \$25 minimum bets online, just ten hours a week will make you over \$6,450 in net profits.

## What Does It Take to Make \$10,000 a Week?

As we have seen, we need to look at different rates of play and betting levels in comparing online play and play in a land-based casino.

If your goal is to make \$10,000 it can be accomplished in different ways. Table 6 below shows the time requirement, at different levels of play, to win \$10,000 a week playing baccarat in a land-based casino.

**Table 6. Time Required to Win \$10,000 a Week in a Land-based Casino**

<i>Minimum Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$25</i>	<i>\$50</i>	<i>\$100</i>	<i>\$200</i>	<i>\$500</i>
<i>Game Bankroll</i>	\$35	\$70	\$105	\$175	\$250	\$700	\$1400	\$2800
<i>Average Winnings Per Hour</i>	\$31	\$62	\$93	\$155	\$310	\$619	\$1238	\$3096
<i>Hours of Play to Make \$10,000 a Week</i>	323	161	108	65	32	16	8	3.2 hrs

Table 7 below show the time required to win \$10,000 a week in an online casino.

**Table 7. Time Required to Win \$10,000 a Week in an Online Casino**

<i>Min Bet</i>	<i>\$5</i>	<i>\$10</i>	<i>\$15</i>	<i>\$20</i>	<i>\$25</i>	<i>\$50</i>	<i>\$75</i>	<i>\$100</i>	<i>\$200</i>
<i>Game</i>	\$35	\$70	\$105	\$140	\$175	\$250	\$700	\$1400	\$2800
<i>Bankroll</i>									
<i>Average</i>	\$129	\$258	\$387	\$516	\$645	\$1290	\$1935	\$2580	\$5160
<i>Winnings</i>									
<i>Per Hour</i>									
<i>Hours of</i>	78	39	26	19	16	8	5	4	2
<i>Play to</i>									
<i>Make</i>									
<i>\$10,000 a</i>									
<i>Week</i>									

If you want to make \$10,000 a week it is far easier to do if you increase the size of your base bets. For instance, a \$50 bettor, playing in a land-based game can win \$10,000 a week in about 32 hours of play. As a \$5 bettor it would take 323 hours of play to win \$10,000.

In online play, the same relationship applies. Here a \$25 bettor can win \$10,000 a week with just 16 hours of play.

The key to winning \$10,000 a week is to start small and build your bankroll out of winnings. It may take several weeks to do this but it is far easier to win large amounts when you start with a larger bankroll and larger wagers.

## Rules to Help You Keep Your Winnings

There is no question that if you follow the *Six-Bet Baccarat System* you will win. I have even given you the average wins per hour achieved in actual play. Does this mean you can relax? Unfortunately no. Even though there is no question that you will win using this system of play, there is still the issue of leaving the casino with your profits in hand.

One of our most important rules to help you leave a winner is the 90% Rule. This rule says very simply that if you are close to hitting a target profit or a daily profit, that sometimes 90% or so is close enough.

I recall very well an acquaintance of mine who had a monster roll at a craps table. When I walked up to the table, Joe was rolling the dice and playing with \$500 chips scattered all over the layout. By the time he sevens out, he was up over \$48,000. This is not bad considering he bought in less than an hour earlier for a grand. I strongly urged him to come with me and take a break. I reminded him how badly he needed this score and how good he would feel walking out with his winnings intact. He nodded and smiled and then gave some lame excuse about wanting to bet with just a couple more shooters.

I had more than made my nut for that day. In fact, catching the last ten minutes of his hot craps roll had put me way ahead. I decided to take a break in the coffee shop and try some of the coconut cream pie which was reputed to be the best in town.

I ran into another friend and talked for over an hour. When I came back out, Joe was still at the same table. I walked up and noticed his pitiful little pile of green chips. Joe gave me a lame look and continued to play. I saw him the next day and asked him how he ended up. "Tapped out," were his words. "You didn't drop the whole 50 grand did you?" I asked.

"It was only 48 thousand," he responded. "The reason I kept playing is because I wanted to hit 50 thousand."

As I walked away, I wondered to myself what in the hell is the difference between 48 thousand and 50 thousand when you are that much ahead?

I think 48 thousand should have been close enough, don't you?

Any time you are struggling to hit a target profit, are playing on a short time schedule or just start to hear that little nagging voice somewhere in the back of your skull telling you to watch out, you can remember Joe. He should have known that 48 grand was close enough. Don't ever get hung up on exact amounts. If you are trying to win \$50 and hit \$48, you can call it close enough and take a break. Remember that you will never go broke by taking a break early and walking off with your profits intact.

Whenever you are somewhere near your target profit for a game, you need to make some changes. Obviously you can just call the game over and quit. However, if the dealer has been busting at a high rate and the table is definitely player favorable, it makes no sense to quit. So you do the next best thing. You move into the conservative betting mode.

## **Living a Life of Ease**

When you go to the casino, you need to remember that your one purpose is to win. You can drink, party, visit, flirt and relax on your own time after you have locked up your daily win. After becoming a proficient baccarat player and increasing the size of your minimum wagers, you will be able to travel a good part of the year, courtesy of your favorite casinos. This may become an important part of your retirement plan. You can use your new skills at baccarat to pay for your vacations and pocket a good deal of change as well.

You may consider becoming a full time pro. Before you make this step, I want you to think about it very carefully. Whereas playing several times a month and winning can bring you a great deal of pleasure, having to play every day to make your daily nut is very difficult.

Casinos can be glamorous and exciting if you don't have to be in one every day. On a daily basis, I can think of many things I had rather do than go through the repetitive grind of play needed to hit my daily win goal. Everyone is different. If you think you would like to turn pro, I suggest you take a two week vacation and spend at least ten of the days in a casino playing baccarat four hours a day. If, after two weeks of this, you are still game for more, then maybe you have what it takes to become a full time player. If you are like me, you may have to settle for being a part time pro and playing less frequently.

I hope you find *Six-Bet Baccarat* to be a lifetime source of income and satisfaction. I would like to hear about your experiences. You may write me in care of the publisher. I wish you the best in all of your life endeavors.
